Python

- Go to python.org and download the latest version for your operating system
- Run the downloaded installer
- **(Windows only)** Before you click install, check the box **"Add python.exe to PATH"** at the very bottom of the first window
- Click "Install Now" and wait for the setup to finish

GitHub Desktop

- Go to desktop.github.com and download the app
- Run the installer (it installs automatically without asking many questions)
- Click **"Sign in to GitHub.com"** and log in with your browser
- Click "Finish" on the configuration screen (your name and email are filled in automatically)

Visual Studio Code (VSC)

- Go to code.visualstudio.com and install the program
- Open VS Code and click the **"Extensions"** icon on the left menu (the four squares)
- Type **"Python"** into the search bar
- Click **"Install"** on the official extension provided by Microsoft (it has millions of downloads)

Clone Repository

- Open GitHub Desktop
- Click on **"File"** in the top left corner, then **"Clone repository…“**
  - Or Click **"Clone a Repository from the Internet…"**
- Select your Project
- Choose a safe folder on your PC under "Local Path" (e.g., Documents/University)
- Click **"Clone"**
- Once finished, click the big button **"Open in Visual Studio Code"** in the center of GitHub Desktop

Create a Virtual Environment

- In VS Code, open the top menu and click **"Terminal" -> "New Terminal"**
- Type the following command exactly as shown and press Enter:
  - Windows: ***python -m venv venv***
  - Mac/Linux: ***python3 -m venv venv***
- Wait a few seconds. A new folder named "venv" will appear on the left side
- In the same terminal, type this command and press Enter:
  - Windows: ***.\venv\Scripts\activate***
  - Mac/Linux: ***source venv/bin/activate***
- **Important Check:** You must now see a green **(venv)** text at the very beginning of your terminal line!
- Look at the bottom right corner of VS Code: If it says **"venv(3.15.0)"** You are good to go

Install Pygame

- Make sure the green (venv) is still visible in your terminal
- Type this command and press Enter:
  - Windows: ***pip install pygame-ce***
  - Mac: ***pip3 install pygame-ce***
- Wait until the loading bar finishes and you see "Successfully installed"

Create and Run Test-Code

- Click the "New File" icon in the left explorer menu
- Name the file **main.py** (Warning: Never name it pygame.py!)
- Write your first line of code: ***print("Hello World")***
- Press **Ctrl + S** (or Cmd + S on Mac) to save the file. (Look at the file tab at the top: A white dot means unsaved, an 'X' means saved)
- **How to run:** Make sure your main.py tab is actively selected in the middle of the screen! Then click the **Play Button** in the top right corner
  - If the Code wont run, click at the bar at the top and select main.py
- Look at the terminal, read through the text. What happened?
